Kavish Patel

Phoenix, AZ (open to relocation) | 480-886-3017 | kavishpatel0205@gmail.com | linkedin.com/in/patel-kavish | github.com/kavish110

Technical Skills

- **Languages and Databases:** Python, SQL, PySpark, JavaScript, HTML/CSS; PostgreSQL, SQLite, Redis, Neo4j
- **Big Data and Cloud:** Spark, Databricks, Kafka, dbt, AWS, Azure Synapse, Microsoft Fabric, Docker, Kubernetes
- **APIs, Integration and BI:** RESTful APIs, FastAPI, Pydantic, ETL/ELT design, Tableau, Power BI, Streamlit
- **Governance and Security:** HIPAA and FERPA compliant reporting, role based access controls, data quality validation
- **AI and Practices:** LLM apps, RAG, agentic workflows, PyTorch, guardrails; Agile/Scrum, Git, CI/CD, data modeling

Experience

Generative AI Engineer Intern, Think Round, Inc. July 2026 - Present

- Build Python services that capture LLM inputs, outputs, and evaluation signals into structured stores, giving the team queryable observability data for model quality and safety reviews.
- Design guardrail checks that validate generated content against policy and quality rules before it reaches users, cutting manual review effort by 15%.
- Ship features in two week agile sprints alongside product and engineering, owning data contracts between AI components and downstream analytics.

Product Engineer, Client Implementation, Exxat Inc. Jan 2024 - May 2024

- Built and maintained production NLP pipelines processing 10M+ records, turning unstructured client documents into clean tables.
- Wrote SQL validation and reconciliation checks during client onboarding, catching schema mismatches and duplicate records before data went live.
- Delivered HIPAA and FERPA compliant reporting and Power BI dashboards, with role based access so each client saw only its own data.
- Mapped client source systems to the platform data model, partnering with support teams to keep integrations on schedule.

Data Analyst, Accelleron May 2023 - June 2023

- Built a KPI pipeline consolidating operational data from 33 regions into one reporting layer, replacing regional spreadsheets.
- Developed financial dashboards tracking sales, revenue, and contract and service status, giving leadership a single view of commercial performance.
- Led the migration of reporting from Tableau to Power BI, rebuilding data models and validating each migrated metric.
- Applied hypothesis testing and forecasting to regional sales data to flag underperforming markets for follow up.

Projects

Amazon Ads Analytics | *Python, dbt, SQL, Streamlit* GitHub

- Built an end to end analytics stack that models ad spend, impressions, and conversions in dbt and serves campaign ROI through a Streamlit front end, helping prioritize marketing investment.
- Added dbt tests for freshness, uniqueness, and null checks so every dashboard metric traces back to a validated model.

Containerized Real Time Graph Analytics Pipeline | Github

- Streamed events through Kafka into Neo4j on Kubernetes, updating relationship metrics continuously instead of in nightly batches, with containerized producers and consumers that scale independently.

TERA: Token Efficient Routing Agent AMD Developer Hackathon: ACT II | Github

- Built a cost optimized AI routing agent using a local regex classifier, deployed on AMD GPUs through ROCm alongside the Fireworks AI API.
- Implemented confidence based escalation and hard output caps to balance false escalations against missed cases while maintaining LLM judge accuracy thresholds.

Education and Certifications

M.S., Data Science, Analytics and Engineering, Arizona State University, Tempe, AZ (GPA 3.7) May 2026

B.E., Electronics and Communication (Minor in Data Science), Charutar Vidya Mandal University, India 2020 to 2024

Certifications: Google Data Analytics Certificate
